DIVERSAS FORMAS

Dentro de la industria existen infinidad de aplicaciones en donde se requieren perfiles en formas diversas y de materiales variados.

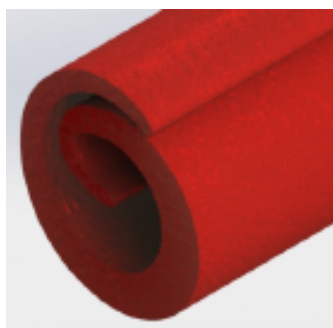

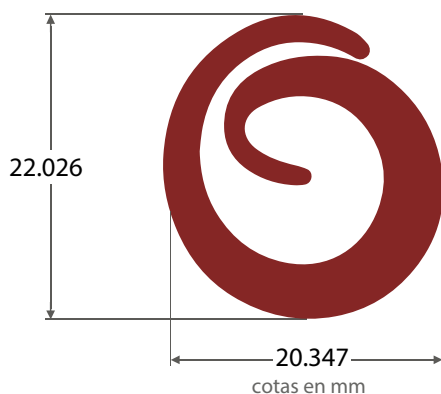

Manufacturas Valroca cuenta con la capacidad instalada para desarrollar cualquier diseño que se adapte a los requerimientos de tu empresa.

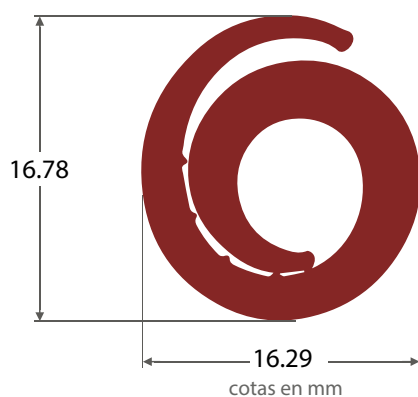

DIVERSAS FORMAS

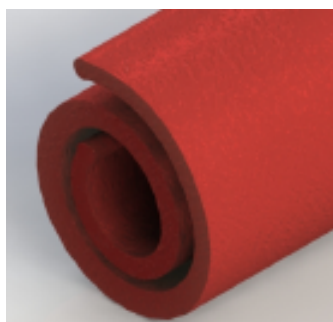

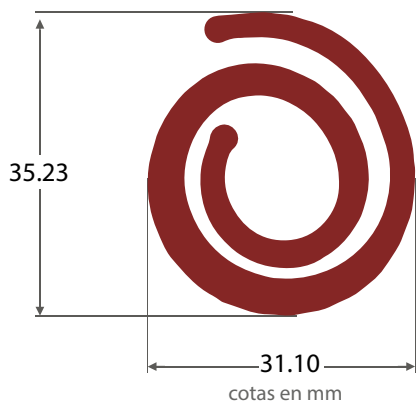

CLAVE: VDXDS623

TIPO e

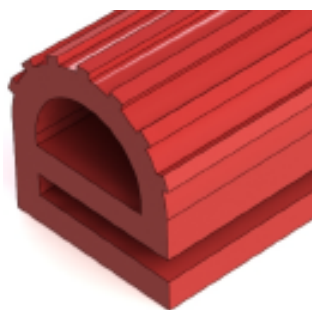

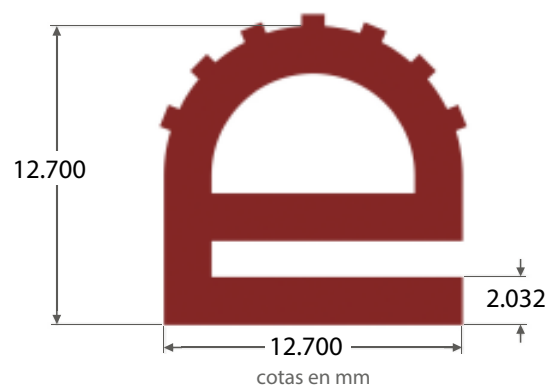

Nuestro proceso de fabricación de extrusión, permite desarrollar cualquier tipo de perfil tipo e a partir de un plano o muestra y entregarlo en rollos de diferentes longitudes desde 25m a 50m o bien cortadas según la necesidad de nuestros clientes.

Su aplicación más común de este perfil es el aislamiento de calor ó frío durante un proceso, para así evitar la pérdida de temperatura al interior de una cámara frigorífica o un horno industrial.

TIPO U

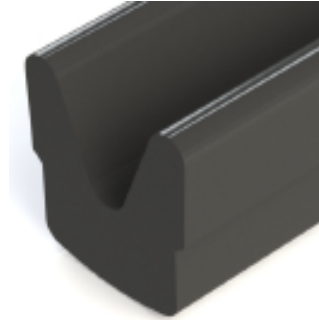

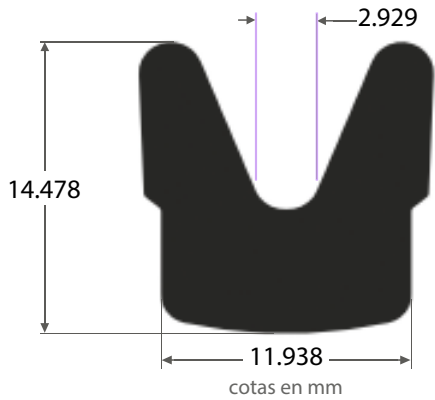

A photograph of a modern building's exterior. The building features a large, multi-paned glass window system with dark frames. The upper part of the window is a single wide pane, while the lower part is divided into three vertical panes. The glass reflects the surrounding environment, including trees and a clear blue sky. To the right of the window, there is a vertical section of the building's facade made of horizontal wooden slats. The overall design is clean and contemporary.

El uso más común de los perfiles tipo u, es para la fijación de vidrio en perfiles de acero y/o aluminio, son utilizados dentro de la industria carrocería y de la construcción, entre otras.

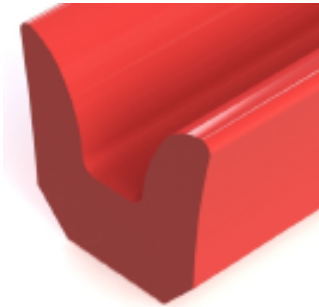

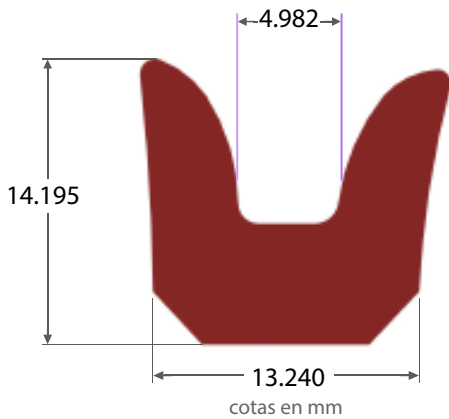

A continuación mostramos un listado de los perfiles tipo u que trabajamos de línea.

Acercate con tu asesor para consultar la posibilidad de fabricación de cualquier perfil tipo u a la medida.
